SOH	Stock on Hand
GRN	Goods Received Note

Assumptions

This user guide assumes that you already have Infectious Diseases Management Information System accounts as per your geographical level and role. This user guide also assumes that you are familiar with basic web-application account login procedures.

System Requirements

The Infectious Diseases Management Information System is accessible from any Desktop PC, Mac, or Linux computer with Internet access and a supported Web-browser.

Browser Support

The following browsers and later versions fully support IDMIS standard view:

- Mozilla Firefox (Windows, Mac, Linux)
- Google Chrome (Windows, Mac, Linux)
- Netscape (Windows, Mac, Linux)
- Safari (Mac)
- Internet Explorer 9 and above (Windows)

Overview

1

Of Infectious Diseases Management Information System (IDMIS)

This *User Manual* provides step-by-step instructions for getting started with the Infectious Diseases Management Information System (IDMIS). It provides guidelines on application features to manage data for Infectious diseases. This user manual is organized according to the logical flow of IDMIS features.

Before You Begin...

It is recommended to have a working internet connection for web-access to the IDMIS web portal in order to use it side-by-side when reading this manual.

Background

USAID | Global Health Supply Chain Program – Procurement and Supply Management (GHSC – PSM) Project, Pakistan was tasked by the Government of Pakistan with implementing a Infectious Diseases Management Information System (IDMIS) for Infectious Diseases using a web-based approach to facilitate country-wide data entry without the installation of any specific software. After several months of thorough consultations with all stakeholders from the public and private sectors, the Project adapted and enhanced the web-based application from the international best practices. The IDMIS was contextualized to the local stakeholder structure and the devolution of responsibility from the national to the provincial and district level.

The rise and rise of infectious diseases compel to adopt and utilize management information system for successful monitoring and analyzing information related to infectious diseases. Management Information system for infectious Diseases is the need of the hour and plays a vital role in successful management and monitoring of those affected by infectious diseases (AIDS, TB, Malaria and COVID). The old traditional methods which relies heavily on manual gathering,

assembling and publicizing information are time consuming and extremely labor-intensive. Hospitals specialized in the treatment of infectious diseases still using old traditional methods that fail to interrelate with each other, result in data duplication, and do not support treatment of the patient as a whole. The motivation behind the use of Infectious Disease Management System is to lessen the administrative cost associated with data collection and analysis. This Infectious Disease Management System was developed to ensure the following:

- Cost effectiveness by means of open source software licensing.
- Centralized mechanism of ensuring collection and monitoring of all infectious disease management data
- Automate the process, introducing a mechanism for decision support as per treatment guidelines.
- Provide comprehensive reporting capabilities.
- Maintain a user friendly interface.

IDMIS has the flexibility to integrate other health related diseases. In addition to the public sector, this application is also able to record national data of diseases of the private sector as well. The system is able to cater the district level reporting of disease data.

In order to sustain the usage IDMIS nationwide, the Project trained the government users of the system through the public sector master trainers. The prescribed training provided knowledge and skills required to enter data into the web-based IDMIS

The IDMIS data visibility plays a significant role in improving stock (i.e of medical supplies) monitoring at the district and sub-district level. Therefore, timely and accurate data entry and submission of monthly reports at the district level are critical to the functioning of the IDMIS. The data collected from the IDMIS can then subsequently be used at each level of the supply chain to enhance informed decision making to meet service delivery demands.

The USAID | Global Health Supply Chain Program – Procurement and Supply Management (GHSC – PSM) Project, Pakistan is providing technical assistance to MoNHSR&C to strengthen the management information system and improve overall supply chain management. During the years 2008-2009, a series of consultative meetings were held between the Ministry and USAID | GHSC – PSM Project, Pakistan to access the requirements of the MoNHSR&C. One of the most important areas which require immediate attention is improved data visibility to ensure improved product availability.

Inventory Management

2

for Infectious Diseases Management Information System

Inventory Management

This chapter explains the step by step instructions on the inventory management features that are used by the infectious disease management system.

When a user clicks the **Inventory Management** tab, the application shows the list of all available Inventories. Click the **Inventory Management** tab from the main menu to show a drop down list which includes a range of Inventories. Users can view the list of inventories from the menu and click on each inventory to edit the data.

Batch Management

Using tab of “**Batch Management**”, when users click on the tab they will get to see the form that is used to retrieve the report for batch management of the stock

The screenshot shows the 'Batch Management' form with the following components and annotations:

- Product Selection:** A dropdown menu labeled 'Product' with 'Select' as the current option. An annotation states: "Product can be selected from here".
- Summary Button:** A blue button labeled 'Summary'. An annotation states: "Summary button is used to see summary of product status".
- Status Section:** A green-bordered box titled 'Status' containing radio buttons for 'Running', 'Stacked', 'Finished', and 'Total (Running + Stacked)' (which is selected).
- Search Fields:** Input fields for 'Batch No', 'Ref No', and 'Funding Source' (with a 'Select' dropdown), followed by a 'Search' button.
- Distribution Buttons:** Two green buttons labeled 'Distribution summary' and 'Detailed distribution'. An annotation states: "User will see the distribution summary of the products by clicking distribution summary button". Another annotation states: "User can see the detailed distribution of the products with respect to priority by clicking the detailed distribution button".

When one selects the product name **Alpha syringes 2.0ML**, he will see the information summary for the selected product.

Product

Alpha Syringes 2.0ML

Status

Running

Stacked

Finished

Expired

Total (Running + Stacked)

Batch No Ref No Funding Source

When the user will click on the distribution summary he will see the detail of distribution report.

GOVERNMENT OF PAKISTAN

Material Distribution Print

Batch status	Description
Unusable	If batch is expired.
Priority 1	If expiry is less than 3 Months.
Priority 2	If expiry is more than 3 months and less than 12 months.
Priority 3	If expiry is more than 12 months.

sr #	Stakeholder	Description	Strength	Storage	Batch / Lot / Serial No.	Expiry Date	Unit Cost	Total Cost	Quantity
------	-------------	-------------	----------	---------	--------------------------	-------------	-----------	------------	----------

Print EXPORT REPORT

Four priorities have been defined related to the stock with different color codes.

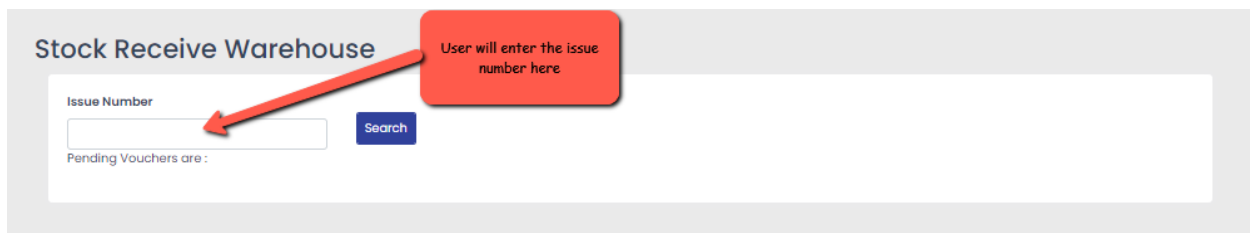

1. **Unusable:** If the stock expired
2. **Priority1:** If expiry is less than 3 months
3. **Priority2:** If expiry is more than 3 months and less than a year
4. **Priority3:** If expiry is more than a year

Stock Receive (Warehouse)

When user clicks on the tab of “**Stock Receive (Warehouse)**”, he will see the form that can be used to search the information related to the issued stock to the warehouse by utilizing the issued voucher number e.g. I22080001.

- **Issue Number** is basically a number that is assigned to the stock when it is issued.

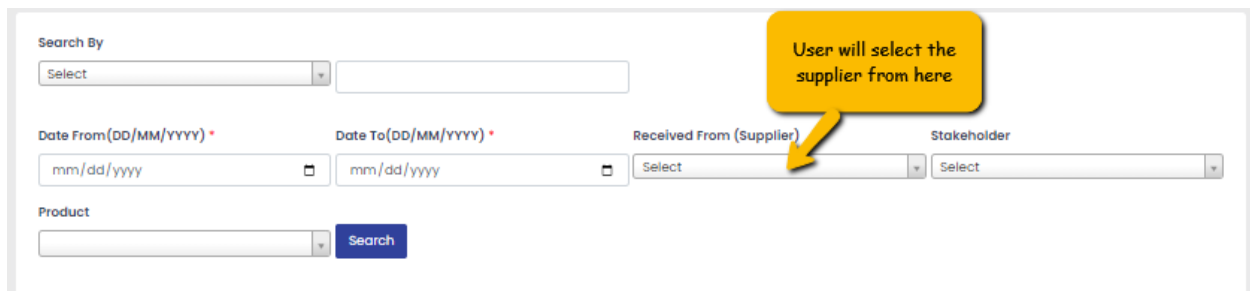

User will enter the issue number and click the search button to see the related information.

The screenshot shows a web form titled "Stock Receive Warehouse". It features a text input field labeled "Issue Number" and a blue "Search" button. A red callout box with a white border and a red arrow pointing to the input field contains the text "User will enter the issue number here". Below the input field, the text "Pending Vouchers are:" is visible.

Stock Receive Search

When user clicks on the tab of “**Stock Receive Search**”, he will see the form that can be used to search the information related to the received stock by utilizing the dates and the supplier name.

The screenshot shows a web form titled "Stock Receive Search". It features several search criteria: "Search By" (a dropdown menu), "Date From (DD/MM/YYYY)" and "Date To (DD/MM/YYYY)" (date input fields), "Received From (Supplier)" (a dropdown menu), and "Stakeholder" (a dropdown menu). There is also a "Product" dropdown menu and a blue "Search" button. A yellow callout box with a white border and a yellow arrow pointing to the "Received From (Supplier)" dropdown menu contains the text "User will select the supplier from here".

What user has to do?

User will select the following

Search by: It is the credential by whom user will search

Date from: It is the starting date of the period user want to select

Date to: It is the ending date of the period user want to select

Received from (Supplier): It is the name of the supplier from which stock is received

Stakeholder: It is the name of the stakeholder which in present case is hepatitis

Product: It is the name of the product

After entering the desired information user will click the search button to search received stock.

Reports

2

for Infectious Diseases Management Information System

Report

This chapter explains the step-by-step instructions on the report features that can be used by the Infectious Diseases Management Information system.

When a user clicks the **Reports** tab, the application shows the list of following tabs:

Consumption Report

The tab of “**Consumption Report**” will show the report of the stock consumed by months and years by the warehouse for different districts of provinces. When the user will enter the required information and click the search button he will get the desired consumption report.

The screenshot shows a web form titled "Consumption Report". The form contains several dropdown menus and a search button. The fields are: Month*, Year*, Stakeholder, Province, District, and Warehouse. A blue "Search" button is located below the Warehouse field. Three red callout boxes with arrows point to specific fields: "Year will be selected from here whose consumption report is required" points to the Year* field; "Warehouse whose consumption report is required is selected from here" points to the Warehouse field; and "Stake holders are selected from here" points to the Stakeholder field.

To search consumption report specify the following filters;

Month: Specify the month

Year: Specify the year

Stake holder: Specify the stakeholder

Province: Specify the province for which consumption report is required

District: Specify the district for which consumption report is required

Warehouse: Specify the warehouse whose consumption report is required

A Stock consumption Report for concerned warehouse will be generated for the selected time.

EMR

3

for Infectious Diseases Management Information System

EMR

This chapter explains the step-by-step instructions on the EMR features that can be used by the Infectious Diseases Management Information system.

When a user clicks the **EMR** tab, the application shows the list of following tabs:

Register Patients

Register Patients is used to register any patient and the information related to him. When the data entry operator log in the system a form will open which can be used to register patients by utilizing the following information

Mr#: It is the Mr number of the patient.

CNIC# / B-Form: It is the CNIC number or B – Form number of the patient.

Full name: It is the full name of the patient.

Gender: It is the gender of the patient.

Date of Birth: It is the date of birth of the Patient.

Address: It is the address of the patient.

Mobile phone: It is the mobile phone number of the patient.

Landline Number: It is the landline number of the patient.

Nationality: It is the nationality of the patient.

Passport Number / Identity Number: It is the passport number or identity card number of the patient.

Remarks: Remarks can be anything related to the patient.

Patient's Personal Data Search Patients > Register Patient

Disease Report

4

for Infectious Diseases Management Information System

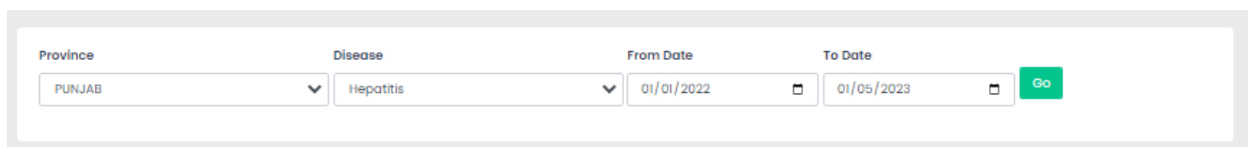

Disease Report

This chapter explains the step-by-step instructions on the Disease Report features that can be used by the Infectious Diseases Management Information system.

When a user clicks the **Disease Report** tab, the application shows the list of following tabs:

Demographic Disease Analysis

Demographic disease analysis button is used to get the report for the disease trends demographically. When the user clicks the Demographic Disease Analysis button a form will open that can be used to search the report for demographic aspects of the disease.

Province	Disease	From Date	To Date	Go
PUNJAB	Hepatitis	01/01/2022	01/05/2023	Go

What user has to do?

User will select the following in the form

Province: It is the name of the Province

Disease: It is the name of the disease

From date: It is the starting date of the period for which user want to check the disease trend.

To date: It is the ending date of the period for which user wants to check the disease.

After Selecting the desired information in the form user will click the go button to search disease trends.

As the user will click the go following form will open that can be used to analyze selected disease trends in selected province

The screenshot shows a data table interface. At the top left, there is a 'Show' dropdown set to '10' and 'entries'. To the right is a 'Search:' input field. Below these are buttons for 'Copy', 'Excel', 'PDF', and 'Column visibility'. The table header includes columns: 'Sr#', 'District', 'Total Population', 'No. of Cases to be Screened', 'No. of Expected Cases', 'Number of PF', 'Number of PV', 'Number of MIX', and 'SPR'. The table body is empty, displaying 'No data available in table'. At the bottom left, it says 'Showing 0 to 0 of 0 entries'. At the bottom right, there are 'Previous' and 'Next' navigation buttons.

What option user can avail in the form?

Search: Search bar is used to search any information in the form.

Copy: Copy button is used to copy the information in the form.

Excel: Excel button is used to copy the information in the form in excel.

PDF: PDF button is used to copy the information in the form in PDF.

Patients Treated

Patient treated button is used to get the report related to patients treated so far. When the user clicks the patients treated button a form will open that can be used to search the report for patients treated for the desired period.

The screenshot shows a form titled 'First Reporting Performa'. It has three input fields: 'Province' with a dropdown menu showing 'PUNJAB', 'From Date' with a date picker showing '01/01/2021', and 'Year' with a date picker showing '01/05/2023'. A green 'Go' button is located to the right of the 'Year' field. In the top right corner, there is a breadcrumb link 'Dashboard > Graphs'.

What user has to do ?

User will first select the province and dates for which user wants to get the report and click the go button to search the report for patients treated for the desired period.

As the user select the required information in the form and click the go button, a form will pop up showing the desired details.

Disease Surveillance

When user click the **disease Surveillance** button, he will see the form that is used to add tests data for desired tehsil / UC that will help in disease surveillance.

The screenshot shows a form for adding test data. It has several dropdown menus for Date, Province, District, Tehsil, UC, and Disease. There is also a dropdown for Test Name and an input field for Total Test. A red arrow points to the Total Test field with a callout box that says "User will enter the number of total tests performed here". A green "Add" button is located at the bottom left of the form.

What user has to do in the form?

User will enter the following information in the form

Date: It is the date when the entry is generated.

Province: It is the name of the province.

District: It is the name of the district.

Tehsil: It is the name of the tehsil.

UC: It is the name of the UC.

Disease: It is the name of the disease.

Test name: It is the name of the test.

Total test: It is the number of the total tests performed.

After entering the information, user will click the add button to add entry in the form. User can also search any previous record by utilizing the following form.

The screenshot shows a search form with two date input fields labeled "From Date" and "To Date". The "From Date" field contains "11/01/2022" and the "To Date" field contains "01/05/2023". There is a green "Search" button to the right of the date fields. A red arrow points to the "Search" button with a callout box that says "Search button is used to search the record".

What user has to do ?

User will first select the dates for which user wants to search the record and click the search button for searching the record for the selected dates.

As the user select the required information in the form and click the search button, a form will pop up showing the desired details

Sr.#	Date	Disease	Test Name	Total Test	Total Positive Cases	Action
1	2022-11-29	Dengue	Anti Dengue IgM	10	9	Edit Deactivate
2	2022-11-29	Hepatitis	HBV (Qualitative PCR)	10	2	Edit Deactivate
3	2022-12-05	Hepatitis	Anti HCV (RDT)	10	3	Edit Deactivate
4	2022-12-08	Malaria	Malaria (Microscopy)	10	6	Edit Deactivate
5	2022-12-28	Hepatitis	HBV (Qualitative PCR)	36	23	Edit Deactivate

What options user can avail in the form?

Edit: Edit button is used to edit the details of the desired test.

Deactivate: Deactivate button is used to deactivate the desired test.

Surveillance Summary

When user click the **Surveillance summary** button, a form will open that is used to search for the surveillance summary for the desired period.

Start Date(MM/DD/YYYY)	End Date(MM/DD/YYYY)	Province	District	
<input type="text" value="mm/dd/yyyy"/>	<input type="text" value="mm/dd/yyyy"/>	<input type="text" value="Select"/>	<input type="text" value="Select"/>	<input type="button" value="Search"/>

What user has to do in the form?

User will first select the dates and then the province and district and click the search button to search for the desired surveillance summary.
